- Repeat pre-emergent applications for full-season restorative care customers.
- Big League's locally blended specialty fertilizer, formulated for Utah lawns.

What Our Customers Are Saying in North Salt Lake

Lawn Services By Big League Lawns in North Ogden, UT

Some of the most often needed [lawn care services](#) we offer for our customers in North Ogden include these general treatments, among numerous types of advanced care:

Lawn Fertilization

Proper fertilizing is essential for transforming severely ailing grass into a pristine green lawn. When a lawn has dense thriving grass, less weed killer is needed. Weeds that otherwise can crowd out grass growth cannot easily fight their way through impenetrable, robust grass root systems. [Fertilization](#) is a key component in producing a lawn that inspires your family and friends to enjoy it.

Lawn Weed Control Services

Weeds compete with grass in a lawn to reach nutrients and water in the soil and to be exposed to sunlight above ground. They're extremely aggressive and can be too difficult to eliminate without professional help from an experienced lawn health specialist. Big League [lawn weed control](#) systems stop weeds from spreading and help prevent them from reemerging.

Lawn Pest Control Treatment

Some of the many common [lawn insects in Utah](#) feed on and damage or destroy tender grass leaves or roots. Lawn grubs (beetle larvae) lie protected in the soil through winter and come to the surface to ravenously feed on grass and leave large areas of dead or brown grass. Mosquitos and other lawn pests also often require professional intervention to safely and effectively control them.

Lawn Aeration

Treatment with a [lawn aerator](#) enables water, nutrients, and oxygen to penetrate hard dry soil and reach the grassroots in areas where the earth is too compacted for saturation by these elements. Aerating allows roots to grow deeper into the soil to become denser and produce enriched, healthier soil and stronger, thicker grass.

Lawn Grub Control

These destructive grubs lie under the soil surface during the cold season and emerge in spring to ravage the grass of many green Utah lawns. They grow to become mature beetles and then thrive on garden plants and flowers. Professional treatment is often necessary to [eliminate extensive lawn grub infestations](#).

Lawn Winterization

A pre-winter assessment by a lawn winterization expert from Big League provides the kinds of needed plans for seasonal lawn care that help many Utah property owners enjoy beautiful, healthy lawns in the springtime. Our winterization program features:

- Core cultivation ahead of the first frost
- Winter fertilization to promote drought tolerance and new growth
- Preventive treatment to stop lawn insects from moving inside your home to escape the cold.

Big League Lawn Care Packages

The surest way to grow the gorgeous thick green grass you want is to leave it to our professionals to apply the necessary periodic lawn treatments throughout the year. Your Big League Lawns diagnostic expert will assist you in determining which types of lawn service packages offer the right solutions for your particular lawn restoration needs.
