## Lawn Fertilization in Riverdale, Utah

---

Great lawns require proper nutrients. Depleted soil cannot support growth of healthy green grass. The soil condition and ground gradation on your property, types, density, and locations of trees, and other factors must be considered in developing the right fertilization regimen for your lawn. Big League's lawn fertilization treatment, featuring our locally designed formula, generates a pristine green lawn that adds value to a home's curb appeal and enhances the neighborhood. Its beautiful lush appearance also inspires people to spend time outdoors enjoying it.

- We add iron sources to our lawn treatment programs, to cultivate the richest green grass.
- Our fertilization promotes root growth, and increases lawn density and drought tolerance.
- In summer, we apply granular fertilizer that features great color without burns.
- We use exceptional locally blended fertilizer balanced for the needs of Utah lawns.

## **Lawn Aeration in Riverdale, Utah**

---

Yards that receive heavy foot traffic, have sat under snow, hard soil types, or extreme amounts of thatching are more likely to be too compacted to enable beautiful green grass to flourish. Yards at newly built homes can also have extremely compacted soil, due to construction equipment traffic being driven and parked on the site for months. Proper treatment is needed to correct the soil condition.

Lawn aeration is a natural way to promote penetration of roots by water, nutrients, and oxygen. The outcome is hearty growth that produces a stronger, healthier lawn.

## **Lawn Weed Control Services in Riverdale, Utah**

---

***Aggressive weeds take space, nutrients, and water from your lawn.*** Big League's lawn weed control processes are designed to eradicate weeds from the lawn and stop others from taking root. Lawn weeds cannot be successfully eliminated by simply pulling them out of the ground. Many species have taproots that penetrate deep into the ground, and they have runners that spread relentlessly after leaves have been mowed or pulled.

The efficiency of our weed control processes has helped make Big League Lawns one of Utah's top-rated lawn services. Our weed control professionals know how to eliminate and prevent the re-emergence of the various species of noxious weeds that are notorious throughout Weber and Davis counties.

- Big League's skilled technicians conquer weeds with highly effective Post Emergent.
- We utilize two pre-emergent applications for both spurge and crabgrass prevention.

## **Lawn Pest Control Treatment in Riverdale, Utah**

---

Some lawn insects can damage root systems of grass, resulting in extensive damage to a once-thriving lawn. Lawn grubs, for example, live dormant in the soil through the cold season, leaving large brown, dead patches of grass on the lawn. It can be too difficult to rid your property of these and other stubborn species of lawn insects, without professional intervention for lawn pest control. Our experts will eliminate concentrations of damaging lawn pest infestation. We rid your lawn of common insects that are harmful to lawns, such as webworms, grubs, beetles, chinch bugs, and others.

## **Lawn Grub Control in Riverdale, Utah**

Grubs feed on grass roots, leaving large areas of dead brown grass. The grubs emerge with warm weather to voraciously gobble roots and kill the grass. These insatiable larvae become adult beetles and then may start devouring garden plants and flowers. They lay their eggs and perpetuate the cycle. ***Avoid using pesticides from a garden supply store as some chemical mixes can be more damaging than helpful to your lawn, and they may not actually eradicate lawn grubs.*** Our experts have the professional materials needed for fully safe and effective treatment to eliminate lawn grubs.

## Lawn Winterization in Riverdale, Utah

Big League’s lawn winterization process features *lawn aeration* prior to the first winter frost. This increases the water and nutrient penetration of roots throughout the winter. *Seasonal fertilization* with our specially formulated local fertilizer increases drought tolerance as well as the density needed to inhibit the growth of weeds and unwanted grass species. Our *fall insect treatment* kills bugs on contact and creates a lasting insect barrier, to protect your home from bugs drawn to the warmth of your home in winter.
