

Lawn Care in Roy

 gobigleague.com/lawn-care-in-roy

Have you found lawn care in Roy to be an almost insurmountable challenge? If so, there are a few good reasons why. Utah, unfortunately, has one of the driest climates in the nation. Weeds and crabgrass plague lawns in the local area. Pests such as white grubs, bill bugs, sod webworms, cutworms, and chinch bugs plague lawns throughout the state. However, the good news is that there are major league players who can handle these and other Roy lawn care issues, enabling you to enjoy your garden and lawn to the fullest without having to spend long hours on maintenance and lawn care.

Lawn Fertilization

There is a lot more to lawn care Roy than buying a bag or two of fertilizer and spreading it around. That is why we conduct an in-depth lawn analysis for every single lawn that we take on. Our lawn care experts look for signs of disease and pests and analyze your lawn's soil type to create a customized fertilizer program that will produce the results you're looking for. What's more, our [lawn analysis is totally free](#) and you have no obligation to work with us after our analysis is complete.

Lawn Aeration

We also handle [lawn aeration](#), the all-important process of creating small holes throughout the lawn so that water and nutrients can soak deep into the soil. Aeration is typically done in the spring and fall to ensure optimal grass growth. Our team offers home and company owners tips on how to prepare a lawn for aeration and then does the hard work of creating holes throughout the soil to ensure the soil is able to absorb water and other nutrients with ease.

Lawn Pest Control

Pests will not only ruin your lawn but can also ruin outdoor events and quiet evenings in the home. Mosquitoes, Ants, and Spiders to name just a few can create hassles and headaches for everyone. Thankfully, Big League Lawns can not only help you get rid of existing pests but also lower the odds of them coming back.

Unlike other large companies, Big League professionals use only eco-friendly pest control methods to ensure that your lawn remains safe for children and pets. To ensure our pest control solutions are effective, we carefully check your lawn to see which bugs you're up against, what type of soil you have, which weeds and plants are attracting pests, etc. We then draw up a plan to successfully eliminate the pests that have taken up residence around your home and lawn without causing damage to the grass, plants, flowers, trees, shrubs, and soil.
